ADVANTA[®] SHINGLE

The ADVANTA[®] shingle is one of the newer additions to ATAS's extensive line of roof systems. ADVANTA[®] is an architectural panel that provides the appearance of dimensional shingles with all of the benefits of metal roofing. The ADVANTA[®] shingle is a proven product with many installations in North America.

Profile Description

ADVANTA® is an architectural panel that provides the appearance of dimensional shingles with the advantages of metal. ADVANTA® shingles are formed from 29 ga. G90 galvanized stucco embossed steel, special material 16 oz. stucco embossed copper. The one foot by three foot panel covers over twice the area of asphalt shingles. The finish is the high performance KYNAR 500® or HYLAR 5000® based coating. ADVANTA® panel is available in 10 standard colors: Brite Red, Redwood, Bone White, Mission Red, Slate Grey, Rocky Grey, Forest Green, Char Brown, Sierra Tan, and Coppertone. The Americana Series utilizes new technology to create six unique shades that enhance the depth perception of the panel. Those colors include: Cape Cod Grey, Smokey Mountain Grey, Grand Canyon Red, Carolina Pine Green, Mojave Desert Tan, and Kodiak Island Brown.

The ADVANTA® Shingle has a four-way interlock and concealed fasteners, no clips are required. ADVANTA will not ignite, rot, warp, break, or chip, and resists pests, algae, or mold. The panel is durable, recyclable, economical, and lightweight.

Test Results For Advanta Shingle

UL1897
UL790 Class A
UL2218 Class 4
ASTM G 26
FL 2905-R1

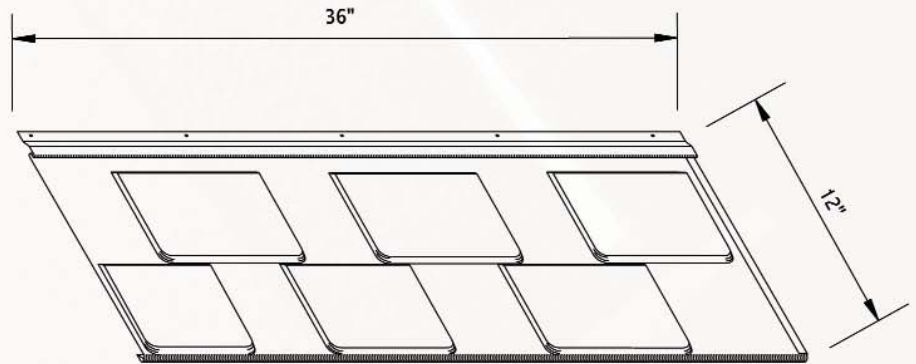

Value

Durability, longevity, and minimal maintenance are benefits that translate to direct cost savings for the building owner. Savings are also possible when using ADVANTA® Shingles for a reroofing project. Because it is lightweight, it can often be applied over the existing roof, thus eliminating the cost of tear-off and disposal. These benefits, combined with ADVANTA® Shingle's limited warranty, equate to long term value.

Installation

ADVANTA® Shingle are installed horizontally in a left to right manner and staggered from eave to ridge. Fastened to a solid underlayment through pre-punched nailing holes, the shingle's four-way interlock design guards against wind-driven rain and wind uplift. Installation manual available on website.

Accessories

ADVANTA® Shingles are readily available through ATAS product distributors. Complete a project with a full line of accessories: eave, gable, valley, and ridge cap, in matching or coordinating colors. Coil stock or sheet material can be provided for field fabrication of custom trims. ATAS International, Inc. also manufactures gutters and soffit systems. Soffit panels can be ventilated for passive ventilation of the roof.
