

Featured Project:
North Carolina Central University (NCCU)
Biomufacturing Research Institute &
Technology Enterprise (BRITE)
Durham, NC
Belvedere Short Rib Panel (BWK360)
Silversmith (both sides)

This 45-foot edifice is the focal point of the NCCU campus and shows the vast options available with metal. The north end of the building was conceived as a gateway for the campus and a striking entrance for BRITE. This modern archway is highly visible from the east and west, and the perforated profile was painted on both sides for a long-lasting screen. Aluminum was chosen for this job due to its corrosion resistance in perforated applications, while providing shade and dramatic lighting effects with this panel design.
