FASTENER SELECTION GUIDE FOR EXPOSED METAL BUILDING AND ROOFING APPLICATIONS

Select a fastener based on the environment and the panel type.
To minimize galvanic corrosion, it is important that the fastener material is compatible with the building material. Contact ATAS International for specific recommendations. ATAS carries Stainless Caps as stock. Please inquire for availability of other fasteners.

NOTE: Electroplated zinc plated screws are not for use in exterior applications and will corrode quickly.

**NOTE:** Impact drivers are not recommended for fastening metal panels, or composite panels used for roof and/or wall system installation. These tools can cause damage to the drill point, break screws, chip painted surfaces, and strip threads on Type 300 stainless steel screws. Over driven screws also damage the EPDM sealing washer and cold potentially cause leaks. Paint damage that occur form using impact driver guns.
